

Practice Lab:

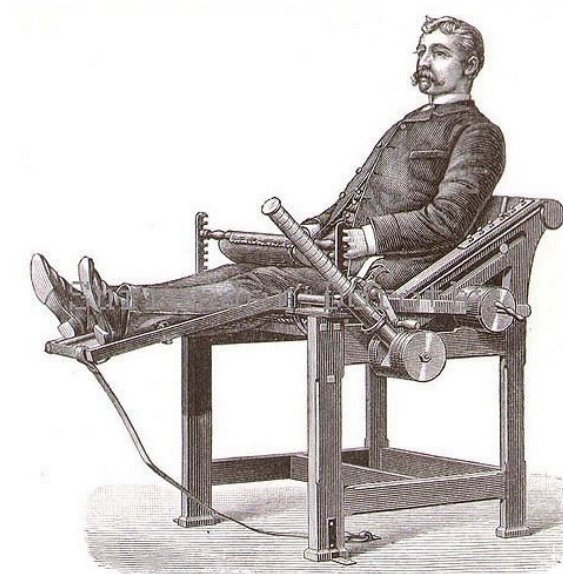

DSE Java Client Side Driver

- This Practice Lab is dependent on Practice Lab 6240, where we detail one method to compile DSE Java client side driver programs. If you do not first complete 6240, then you need instruction towards another means to compile.
- This Practice Lab is dependent on Discussion Unit 6244, where most of the objects we create in this lab were introduced.
- In this Practice Lab, we create and compile two CQL SELECT loops; the first using Statement(s), and the second using Query Builder

Challenge 1: SimpleStatement

Prerequisites:

- Instructions are provided for Linux
- We will operate below recommended settings; 1 OS node only, minimum 8 GB RAM, 12 GB RAM preferred
- That you have an operating single node DSE Core cluster.
- All work done as 'root'

Challenge 1: Set up (IDE), Make Table and Data

- Complete Practice Lab 6240, or another similar lab, where you are able to compile a DSE Java client side program.
- Create a CQL keyspace, table, add data.
- Use a multi-column partition key and clustering column to your table.

Challenge 1: Simple Statement

Using Discussion Unit 6244-

- Deliver a 'fetch loop' using a SimpleStatement
- Print rows from the table you created on the previous page.

Challenge 2: Query Builder

Using Discussion Unit 6244-

- Deliver a 'fetch loop' using Query Builder
- Print rows from the table you created on the previous page.
