

Practice Lab:

DSE Core Backup and Recovery

- This Practice Lab is dependent on Discussion Unit 6254, where most of the objects we create in this lab were introduced.
- In this Practice Lab, we create a table, add data, snapshot, delete the table's contents, then restore.

Challenge 1: Backup, then Restore

Prerequisites:

- Instructions are provided for a single node DSE Core cluster.
- *There are additional steps for a multi-node cluster, that we overviewed in the Discussion Unit.*
- Instructions are provided for the command prompt using CQLSH, nodetool, other.
- All work done as 'root'

Challenge 1: Backup, then Restore

Using instructions from Discussion Unit 6254, complete the following:

- Make a keyspace and table, add data
- Snapshot the above
- Truncate said table
- Check for data
- Copy the data files back to the proper location
- nodetool refresh
- Check for data
- nodetool clearsnapshot --all
