

Practice Lab:

Create a cluster using
AWS

- This Practice Lab is dependent on Discussion Unit 6260, where most of the objects we create in this lab were introduced.
- The goal of this practice lab is to make a cluster.

Challenge 1: Create a Cluster

- Log into the the AWS web console
- Provision 3 machines
 - Type of machine is your choice though the OS has to support DSE
 - Limit your disk space to only 100GB as we are not going to do a lot with these instances

- Don't forget to
 - Use the right security group for DSE ports
 - o The quick is to open up ports according to firewall guide to 0.0.0.0
 - o This is not optimal as not near secure enough but works for a quick demo
 - o Remind clients they should do much more in the security arena for prod
 - Download your certificate
 - After the instances are up use your cert to log into each instance to verify it is up and you have access

After you are done leave the instances up as we will use them for a future exercise
