

Practice Lab:

DSE Search, Query
Syntax, Facets, other

- This Practice Lab is dependent on Discussion Module 7451, where most of the objects we create in this lab were introduced.
- This Practice Lab requires a working DSE system, with DSE Search enabled, and with ability to execute CQL DDL.
- No command line prompt is required.
- All commands are run from CQLSH, or DSE Studio.

Challenge 1: Be Amazon

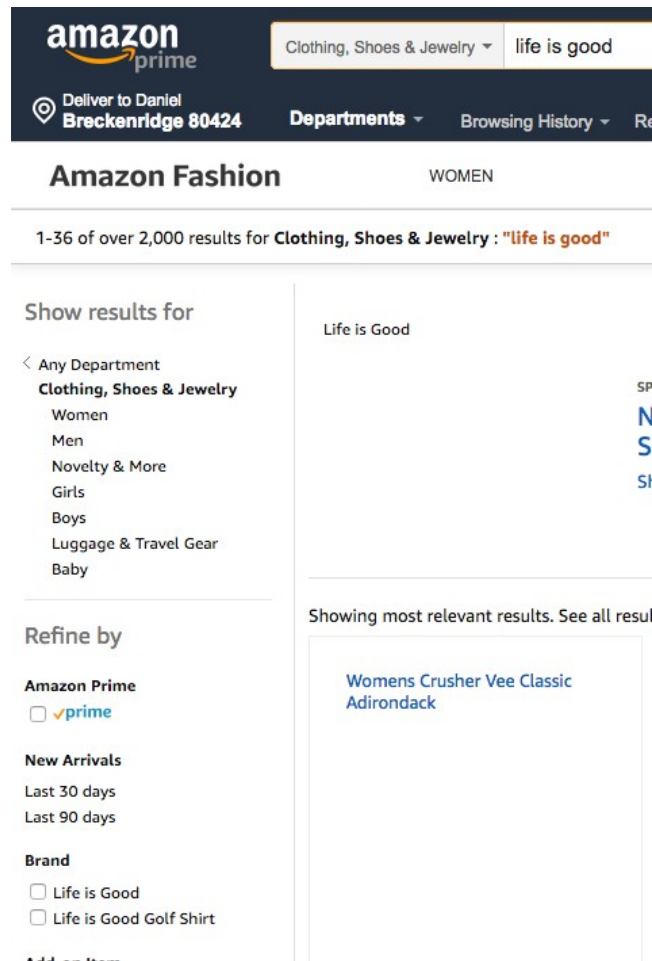

- Create the runtime environment to support the query “computer mouse”, and return a faceted set of results similar to those in the image on the left. (A query response is okay; no Html required.)
- Design and create the tables, data, indexes, and query.
- The (data model) should be generic, so that you can also satisfy the query “Volvo accessories”, and get an appropriate facet response.
- You can use a non-tokenized key value for the initial query.

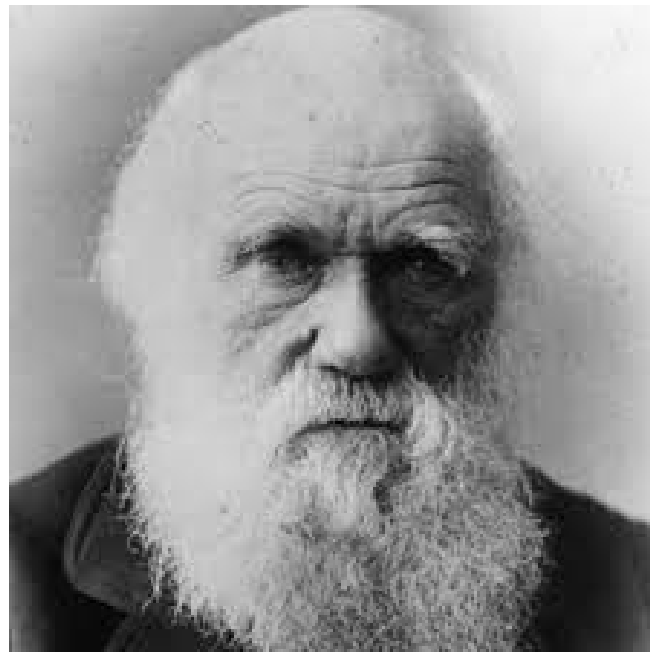

Challenge 1: Be Amazon

- The (data model) should be generic, so that you can also satisfy the query “Life is Good”, and get an appropriate facet response.

(In other words; prove that your model works with more than once product.)

Go Farther: (Optional)

Born in Shrewsbury, England, in 1831 Charles Robert Darwin embarked on a five-year survey voyage around the world on the HMS Beagle; his studies of specimens led him to formulate his theories.

Challenge 2 (Optional): Add a leading phrase search-

From Challenge 1-

- It was okay to use a non-tokenized key value for the initial query.
- Change from marketing; that's no longer okay.

The initial query should return the same results for; “computer mouse” or “mouse computer”, “life is good”, “good life”.

- *To save time, you can do all of this work on new tables, etcetera.*
